

The Electronic Asthma Management System (eAMS) is a free evidence-based clinical decision support system developed to help providers deliver the best care for patients with asthma

How the eAMS Works

Patients provide information about their asthma

Patients complete a simple questionnaire about their asthma symptoms, triggers and medications through the free eAMS mobile app or web portal

Computerized algorithms provide recommendations

Algorithms based on the latest asthma guidelines process patient responses to determine asthma control level and create corresponding therapeutic recommendations

Asthma management advice for the provider

A simple eAMS plug-in allows secure, seamless integration with OSCAR and PS Suite. Recommendations and a personalized asthma action plan for your patient are available instantly upon opening the chart

Getting Started is Easy

Step 1: Learn more

Visit www.easthma.ca to learn more about the eAMS and to request a demo

Step 2: Add the eAMS plug-in

Contact our onboarding team to receive simple instructions to download the eAMS plug-in for your EMR

Step 3: Offer best care

Receive latest evidence-based recommendations for each asthma patient and improve quality of asthma care

The eAMS was developed by Canadian researchers, has been proven to improve care in real-world clinics and has been endorsed by the Canadian Thoracic Society. Partners and funders include:
